Same data, 20 random starts: better recovery of A goes with lower error on shifted slates
(a) Self-attention (1 layer): partial correlation 0.73
(b) Mean-pool (2 layers): partial correlation 0.77
KL on shifted slates, relative to runs with the same data and test KL (log)
error in A, relative to runs with the same data and test KL (log)
error in A, relative to runs with the same data and test KL (log)
